

# Web Take Home Exercise - Advanced

## Prompt

Create a webpage that loads on the left side a series of small blue boxes and on the right side one large red box. A user should be able to click and drag the blue boxes one at a time to a new location on the screen, including on top of the red box. The red box does not move. Below the red box is a label that indicates the total area visible area of the red box measure in pixels.

## Bonus Prompt

The user can toggle between the shapes on the left being boxes or circles.

## Deliverables

Your solution should be delivered as a publicly accessible repository on GitHub, along with a README file that explains how to run the project and any additional notes or considerations. You are welcome to use whichever technology stack you would like.
